WORK EXPERIENCE

.NET Backend Developer

06/2020 - currently

Paragon Software, Germany (remote)

Develop services for B2B and e-commerce. Extend auth service that issue JWT tokens; add OAuth 2.0 authentication support through social networks (Facebook, google, microsoft). Full cycle of development and support services for marketplace: from writing specification, development, deployment, review for another developers and QA engineers. Integrating service for search products through Elasticsearch. Unification events for datalake, writing filters for logstash to transform old events to new format.

Software Developer

09/2016 - 06/2020

Program Center, Russia

Develop software solution for cadastral engineers. Solution consists of desktop application and web part to interact with government systems. Besides development I help in on-boarding process and mentoring new employees. Optimize technical departments interaction processes, participate in implementation of the git-flow and configure CI.
