WORK EXPERIENCE

.NET Backend Developer

06/2020 - currently

Paragon Software, Germany (remote)

Develop services for B2B and e-commerce. Extend auth service that issue JWT tokens and add OAuth 2.0 authentication support through social networks (Facebook, google, microsoft). Participate in all stages of development: technical design, implementation, testing, deployment, presentation for another developers and QA engineers. Develop and integrate product's search service that uses Elasticsearch. Unify events format for company datalake and write filters for logstash to transform old events to new format. Write unit, integration and functional tests for services.

Software Developer

09/2016 - 06/2020

Program Center, Russia

Develop software solution for cadastral engineers that consists of desktop application and web part to interact with goverment systems. Besides development I help in on-boarding process and mentoring new employees. Optimize interaction processes between technical departments. Participate in implementation of the git-flow and configure CI in Azure DevOps.
